Teledyne LeCroy Test Services Nuclear Quality Assurance Statement

Teledyne LeCroy Test Services (TLTS) maintains a Quality Assurance Program that is structured on the requirements of the Title 10, Part 50, Appendix B of the Code of Federal Regulations (10CFR50) and ASME NQA-1-2008, Add. NQA-1a-2009 with 10CFR21 reporting responsibility. Teledyne provides the nuclear industry with safety related SMARTSTEMs, strain gage sensors, Motor Operated Valve (MOV) and Air Operated Valve (AOV) testing and diagnostic equipment, engineering services, and safety related software.

TLTS classifies individual products, components, and/or services as commercial, safety related and or commercial grade based on the requirements. Our Quality Assurance program is invoked on products and services that are classified by Teledyne as safety related (SR). Verification and Validation (V&V) process results may be used to classify products as safety related. If no QA requirements, standards, codes, or regulations are noted on a customer's purchase order, these orders are processed as commercial items.

The program assures full compliance with the requirements of the nuclear power industry for both safety-related and commercial grade products. The current program revision is *Quality Assurance Manual 4th Edition R1, dated May 1st, 2019*.
